### VLSI ASSIGNMENT-3

i) To implement PODEM Algorithm -

Initial objective:  $G2 = 0$  so as to activate the s-a-1 fault.

Backtracing through  $G2 \Rightarrow C = 1$   
 $d = 1$

$e = 1$ , Objective achieved

Objective:  $G1 = 0$

Backtracing through  $G1 \Rightarrow a = 0$

$b = x \rightarrow$  one possibility  
Objective achieved

Objective:  $G3 = 1$

Backtracing through  $G3 \Rightarrow h = 1$

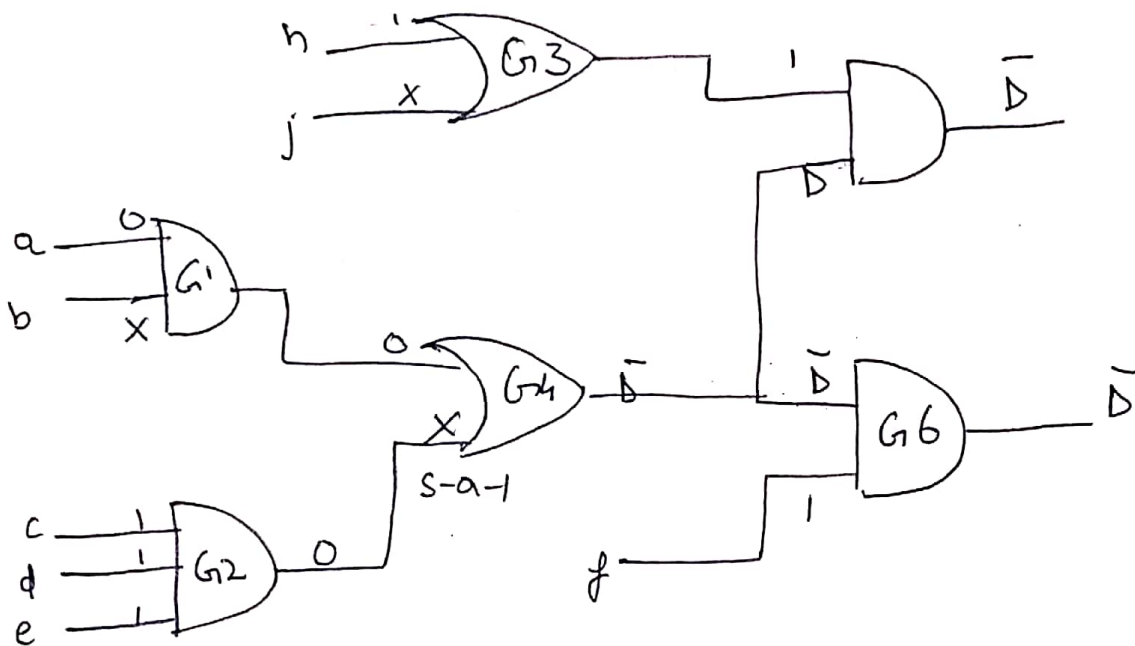

$f = x \rightarrow$  one possibility  
Objective achieved

Teacher's Signature.....

Propagating through G5:

Test generated:  $abcde f h j = 0 \times 111 \times 1 \times$

ii) To implement FAN algorithm

Initial objective :  $G2 = 0$  so as to activate  $sa-1$  fault

Implication : Assigning  $c=1, d=1, e=1$

Objective : propagate through G4, objective  $G1 = 0$

Implication :  $a=0, b=X$

Objective : propagate through G5, objective  $G3 = 1$

Implication :  $h=1, j=X$

Test generated :  $abcde f h j = 0 \times 111 \times 1 \times$

Objective : propagate through G6, objective  $f=1$

Implication :  $f=1$

Test generated :  $abcde f h j = 0 \times 1111 \times \times$
